	Final Paper undergraduate course - Poli Usp - Computer Engineer Dez 2022 The project involved advanced manipulation of cone beam computed tomography (CBCT) data and image processing techniques to identify dental structures and lesioned regions. These results were integrated into software created within the Unity environment.
EXTENSION GROUP	MaratonUSP - Programming marathon Ago 2018 – Nov 2019 The group aims to solve problems with a stronger theoretical focus using algorithms typical of Programming Marathons, with practical approaches to topics such as Dynamic Programming, Data Structures, and Graphs.
HONORS	Best Final Paper of the Computer Engineering Poli - USP 2022 The final project involved using image processing for segmentation and machine learning to classify the intensity of caries, as well as incorporating virtual reality for result visualization.
	Second place for best paper in the undergraduate category at the National Meeting of Ar-

tificial and Computational Intelligence (ENIAC)

The research focused on image classification in computed tomography for pulmonary embolism classification, leveraging convolutional architectures with LSTM and TCN modules.
